

Scientific research on having children

Dear Respondent!

This questionnaire was commissioned by the Lendület Research Group on Reproductive Decisions, funded by the Hungarian Academy of Sciences. The work of the research group can be followed at <https://reprosoc.tk.hu>.

The researchers want to find out what opinions Hungarians have about having children, whether they are young or old, women or men. The research is led by Dr. Ivett Szalma, Research Professor at the HUN-REN Centre for Social Sciences. If you have any questions about the research, please contact szalma.ivett@tk.hu.

The topics are wide-ranging and we ask you to answer this questionnaire as honestly as possible and to the best of your knowledge. If you feel uncomfortable completing it, you can stop at any time.

There is no obligation to answer, but successful responses will be rewarded with a 2000 HUF EMAG voucher, which will be automatically sent to your e-mail address within a few hours of submitting the questionnaire. The response is anonymous: your answers cannot be linked to you personally.

The length of the response will vary from person to person, but will take approximately 30 minutes. Thank you for your time to complete the questionnaire.

Best regards: the Panelstory team
